DETAILED ACTION

1. Claims 23-110 are presented for examination.
2. The rejections are respectfully maintained and reproduced infra for applicant's convenience.

Double Patenting

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 23-110 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 23-152 of copending Application No. 10/784,835. Although the conflicting claims are not identical, they are not patentably distinct from each other because both systems still operate in the same manner when the control circuit receives control signals either internally ("local control signals" as claimed in the instant application) or externally ("incoming control signals" as claimed in 10/784,835).

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Response to Argument

5. Applicant's arguments filed April 12, 2005 have been fully considered but they are not persuasive.

6. In the remarks, applicants argued in substance that there are patentably distinct differences exist between claims 23- 110 of the instant application and claims 23-152 of copending Application No. 10/784,835. In the instant application, the power management instruction arrives via the interface electrodes is processed the first portion of pipeline circuitry to provide local control signals which, in turn, affect the clock control signals. On the other hand, in the copending Application No. 10/784,835, control signals arrive via the interface electrodes affect the clock control signals.

7. However, it is seen that both system generate the same clock control signals whether the clock control signals affected by either local control signals (internal control signals) or control signals received via the interface electrodes (external control signal). Therefore, claims 23-110 of the instant application and claims 23-152 of copending Application No. 10/784,835 are not patentably distinct from each other.

Conclusion

8. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after

Art Unit: 2116

the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
